Panel Backlight System
PN: 8069

Features
- Easily installed in Blue Sea Systems' power distribution panels
- Unique 10 position design that can be shortened for 8, 5, and 3 position panels
- Connects to 12 or 24 Volt DC source via two 12" 18 AWG wire leads.

Specifications
- Current Draw: 5mA / LED
- Power Supply: 12/24V DC

Guarantee
Any Blue Sea Systems’ product with which a customer is not satisfied may be returned for a refund or replacement at any time.

Installation
1. Installation of backlight board
The backlight board is mounted between the 2 black bus support blocks on the back of the panel as shown.

   The backlight board can be easily shortened to fit all Blue Sea Systems backlightable panels. For panels with 8" buses no shortening of the board is necessary.

   For 6-1/2" buses, snap off section D furthest from the wire leads.

   For 4-1/4" buses snap off section B and C.

   For 2-3/4" buses snap off section B, C and D. It may be necessary to lightly sand the end to remove any rough edges.

Loosen the single screw retaining the lower bus block exactly 1 turn. Then loosen the upper screw 2 turns.

2. Electrical Connection
For DC Panels
Connect the yellow negative wire to the panel negative bus.

To activate the label lights by the boat’s battery switch, connect the red positive wire to the DC panel positive bus.

To activate the label lights by an independent switch or breaker, connect the red positive wire to the load side of the switch or breaker.

For AC Panels
The backlight board is a DC device. When installing it in an AC panel both wire leads must be connected to an appropriate DC source and ground.

Connect the yellow negative wire to a DC ground. Connect the red positive wire to any DC positive supply, usually a switch that controls the vessel's other nighttime illumination.
