AC Main Power Distribution Panels

PN 8027 / PN 3027 / PN 8029 / PN 3029 / PN 8463 / PN 3463
PN 8464 / PN 3464 / PN 8465 / PN 3465 / PN 8485 / PN 3485

Panel Specifications
- Material: 0.125” 5052-H32 Aluminum Alloy
- Primary Finish: Chemical Treatment per Mil Spec C-5541C
- Final Panel Finish: Color coat 2 part textured Polyurethane
- Circuit Breakers: 30 amp Double Pole and 15 amp Single Pole AC/DC
- Magnet Breakers 65V DC/277V AC maximum
- Amperage Rating: Panel is rated for 30 amps service.
- Voltage Rating: Panel is rated for 120 volts AC and are so marked in order to comply with ABYC standards

Overall Dimensions: 8027/3027 5-1/4 x 7-1/2 133.4 x 190.5
8029/3029 5-1/4 x 3-3/4 133.4 x 95.3
8463/3463 14-3/4 x 4-1/2 374.7 x 114.3
8464/3464 10-1/2 x 7-1/2 266.7 x 190.5
8465/3465 14-3/4 x 7-1/2 374.7 x 190.5
8485/3485 5-1/4 x 11-1/4 133.4 x 285.8

Mounting Centers: 8027/3027 4-7/16 x 6-11/16 112.7 x 169.9
8029/3029 4-7/16 x 2-15/16 112.7 x 74.6
8463/3463 13-29/32 x 3-11/16 354.0 x 93.7
8464/3464 9-11/16 x 6-11/16 246.1 x 169.9
8465/3465 13-15/16 x 6-11/16 354.0 x 169.9
8485/3485 4-7/16 x 10-7/16 112.7 x 265.1

Applicable Standards

Installation

1. Disconnect all AC and DC power
   Disconnect all AC power originating on or off the vessel. This includes inverters, generators, shore power attachments and any other device capable of supplying AC power to the ship’s circuits.

2. Select mounting location and cut opening
   If this panel is to serve as your main shore power disconnect circuit breaker, select a location which is not more than 10 feet from the shore power inlet or the electrical attachment point of a permanently installed shore power cord as measured along the conductors of the feed wires.
   If it is more than 10 feet additional fuses or circuit breakers must be installed within 10 feet of the shore power inlet.

   Select a mounting location which is protected from water on the panel front and back and is not in an area where flammable vapors from propane, gasoline or lead acid batteries accumulate. The circuit breakers used in marine electrical panels are not ignition protected and may ignite such vapors.

   Using the panel template provided, make a cut out in the mounting surface where the distribution panel is to be mounted. Do not yet fasten the panel to the mounting surface.

3. Install branch circuit wires
   Determine the proper wire size for each branch circuit using the wire sizing chart. Verify that the standard 15 amp circuit breakers installed in the panel are correct for each branch circuit. Remove and replace any that are incorrectly sized. The circuit breaker must have a rating less than the allowable amperage of the wire, yet greater than the circuit’s continuous current.

Verifier that all the knowledge of electrical systems may be necessary to correctly install this product. If the installer is not knowledgeable in electrical systems we strongly recommend that an electrical professional be retained to make the installation.

If either the panel front or back is to be exposed to water it must be protected with a waterproof shield.

The panels must not be installed in explosive environments such as gasoline engine rooms or battery compartments as the circuit breakers are not ignition proof.

The vessel’s shore power cord must be disconnected from shore side power before installing this electrical panel.

If an inverter is installed on the vessel its leads must be disconnected at the battery before the panel installation. Be aware that many inverters have a “sleep mode” in which their voltage potential may not be detectable with measuring equipment.

If an AC Generator is installed aboard it must be stopped and rendered inoperable before the panel is installed.

Verify that no other AC source is connected to the vessel’s wiring before the panel is installed.

Guarantee
Blue Sea Systems stands behind its products for as long as you own them. Find detailed information at www.bluesea.com/about.

WARNING

- It is not possible within the scope of these instructions to fully acquaint the installer with all the knowledge of electrical systems that may be necessary to correctly install this product. If the installer is not knowledgeable in electrical systems we strongly recommend that an electrical professional be retained to make the installation.
- If either the panel front or back is to be exposed to water it must be protected with a waterproof shield.
- The panels must not be installed in explosive environments such as gasoline engine rooms or battery compartments as the circuit breakers are not ignition proof.
- The vessel’s shore power cord must be disconnected from shore side power before installing this electrical panel.
- If an inverter is installed on the vessel its leads must be disconnected at the battery before the panel installation. Be aware that many inverters have a “sleep mode” in which their voltage potential may not be detectable with measuring equipment.
- If an AC Generator is installed aboard it must be stopped and rendered inoperable before the panel is installed.
- Verify that no other AC source is connected to the vessel’s wiring before the panel is installed.

Wire sizing chart
Use the wire sizing chart below to determine the proper branch and feed circuit wire sizes.

<table>
<thead>
<tr>
<th>Wire Size (AWG)</th>

</tbody>
</table>

Note: This chart assumes wire with 105° C (221° F) insulation rating and no more than 3 conductors are bundled. Not suitable for sizing flexible shore power cords.

Blue Sea Systems recommends that the feeder wires from the power inlet to the panel should be 10 AWG for 30A systems and 6 AWG for 50A systems.

9575 Rev. 012

Connect each branch circuit hot (black) to the appropriate load terminal. Connect each branch circuit neutral (white) to one of the screws on the neutral bus. Connect each branch safety ground wire (green) to one of the screws of the safety ground bus.

Do not confuse the neutral current carrying wires (sometimes called ground) with the green normally non-current carrying wires (sometimes called grounding). These two wires must be connected only at the source of power, nowhere else.

4. Install feed circuit wires

Install the feed wires from the shore power inlet or other AC source, referring to the wire sizing chart to select the correct wire size. Connect the black AC hot, white AC neutral and green AC safety ground as shown in the illustration.

If the feed wires are from the shore power inlet or the electrical attachment point of a permanently installed shore power cord and the inlet or attachment point is more than 10 feet from this panel, an additional fuses or circuit breakers must be installed within 10 feet of the shore power inlet. The measurement is made along the conductors.

5. Installation of Backlight System

The backlight board is a DC device. When installing it in an AC panel both wire leads must be connected to an appropriate DC source and ground.

Connect the yellow negative wire to a DC ground. Connect the red positive wire to any DC positive supply, usually a switch that controls the vessel’s other nighttime illumination.

6. Apply branch circuit labels and mount panel

Apply a label for each of the branch circuits from the 30 basic labels provided (not provided for PN 3029 and PN 8029). If the appropriate label is not included, the Extended Label Set of 120 labels may be ordered from your marine supplier (PN 8067). Individual labels are also available from Blue Sea Systems for specific applications. Refer to the label order form for a complete listing of individual labels.

Fasten the panel to the mounting surface using the panel mounting screws supplied with the panel.

7. Testing

Connect the vessel’s shore power and verify the Reverse Polarity light is not illuminated. If the red Reverse Polarity light is on then either the hot and ground or the hot and neutral wires have been crossed. Starting at the panel, trace the connections back as far as necessary to locate the error.

8. Optional Branch LEDs

This Panel is supplied with LEDs pre-installed in all optional branch positions. For future expansion of the panel remove the hot leg of the LED from the AC Neutral Bus and connect it to the Load side of the branch circuit breaker.

Note

This Blue Sea Systems electrical distribution panel is furnished with 15 amp AC/DC circuit breakers for all branch circuits. This rating was selected to minimize the need for removing the panel’s circuit breakers and reinstalling different size circuit breakers. It is rare to have more than 15 amps of current flowing in any one circuit. Therefore, 15 amp circuit breakers will satisfy the vast majority of marine circuit protection situations.
