ML–Series

Remote Battery Switches (with manual control)
PN 7700 / PN 7702

Solenoid Switches (without manual control)
PN 7701 / PN 7703

- Magnetic Latch—draws no current in ON or OFF state, only draws current when changing state of switch
- Manual cranking override knob provides an added level of safety allowing control with or without power, offering LOCKED OFF capability for servicing (Remote Battery Switch ONLY)
- LED output to remotely indicate switch state
- Tin-plated copper studs for maximum conductivity and corrosion resistance
- Label recesses for circuit identification

Remote Switch PN 2145

- Action: Momentary SPDT (ON)-OFF-(ON)
- Seals: Internal & External Gasket Panel Seal
- Mounting Hole: 0.83” x 1.45” (21.08 mm x 36.83 mm)
- LED Rating: 100,000 hours half-life

Continuous Rating

- See table below
- See table below

Overview of Application

The ML-Series Remote Battery Switch/Solenoid Switch provides high-current carrying and switching under load. The Remote Battery Switch/Solenoid Switch is installed close to the battery banks. A single pole double throw (SPDT) Control Switch Panel, or two momentary push button switches, operate the Remote Battery Switch/Solenoid Switch. Control Switches are installed in a convenient location near other electrical controls or companionway (see illustrations on reverse).

The Manual Control Override Knob provides (Remote Battery Switch Only):
- an added level of safety that allows manual ON-OFF control with or without power
- LOCK OFF for servicing the electrical system

Remote Operation. The momentary (SPDT) (ON)-OFF-(ON) Remote Control Contura Switch can provide cross connect and/or battery isolation. The Control Switch should be mounted in a convenient location near helm controls to allow for quick access.

Emergency Manual Control Override Operations (Remote Battery Switch Only)

* If the Control Switch is held ON or OFF for 5 seconds, the internal coil protection will engage and the Remote Battery Switch/Solenoid Switch will not respond to further remote input for approximately 10 seconds.

Installation Instructions

Mounting
Install as close as possible to battery bank. To avoid corrosion to connecting wires and terminals, mount in a dry and protected location. Avoid mounting directly above vented lead acid batteries so that the Remote Battery Switch/Solenoid Switch is not exposed to corrosive gasses expelled from the batteries.

High Current Primary Circuit Connections (stud terminals A and B)
For help selecting the appropriate wire size and circuit protection rating, go to www.bluesea.com and click the Circuit Wizard quick link.

NOTE: Stud terminals A and B are interchangeable. The load can be connected to A or B; the battery bank can be connected to A or B.

To connect high current circuit wires:
1. Connect the battery bank to one of the stud terminals marked A or B.
2. Connect the load to the other stud terminal marked B or A.
3. Torque the high current terminal stud nuts to 140 in-lbs (15.8 N•m) maximum.

NOTE: If switching an inverter, windlass, bow thruster, etc., the circuit wires must have circuit protection to comply with ABYC guidelines. Wires used for engine starting do not require circuit protection.

Control Circuit Connections (wires contained in the wire harness)
NOTE: The Remote Battery Switch/Solenoid Switch is designed to be controlled by momentary SPDT switch, (included), or two momentary push button switches. Use minimum 16 AWG wire for the Control Circuit.

To connect DC power to the Remote Battery Switch/Solenoid Switch Control Circuit:
1. Connect the red wire through a 10A (min) circuit protection device to DC+. The power source should be a direct connection to the battery.
2. Connect the black wire to DC ground.

To connect the momentary SPDT Contura Control Switch:
1. Connect the common load terminal of the Control Switch, pin 2, through a 2A (min) circuit protection device to DC+. Use a 24-hour power source (connected directly to the battery).
2. Connect the brown wire to the CLOSE side of the Control Switch, pin 3.
3. Connect the orange wire to the OPEN side of the Control Switch, pin 1.
4. Connect the LED power terminal of the Control Switch, pin 8, through 2A (min) circuit protection device to DC+. Note: This connection can share the same wire/fuse as step #1 above, (see diagram).
5. Connect the LED Ground terminal of the Control Switch, pin 7, to the yellow wire of the Remote Battery Switch.

Guarantee
Blue Sea Systems stands behind its products for as long as you own them. Find detailed information at www.bluesea.com/about. For customer service, call 800-222-7617.
